INSTALLATION

Water Pressure

Electrical Facilities

Existing Plumbing

iron ýlter unit should be installed ahead of the water softener.

Location Of Softener And Drain

breaks and back þow.

By-Pass Valves

CAUTION **Water pressure is not to exceed 125 psi (8.6 bar), water temperature is not to exceed 110°F (43°C), and the unit cannot be subjected to freezing conditions.**

Installation Instructions

making sure the unit is level and on a ýrm base.

should be a minimum of 1/2" (13 mm). Backwash þow rates

lines should be the same size as the drain line þow control.

distributor tube þush with the top of the tank.

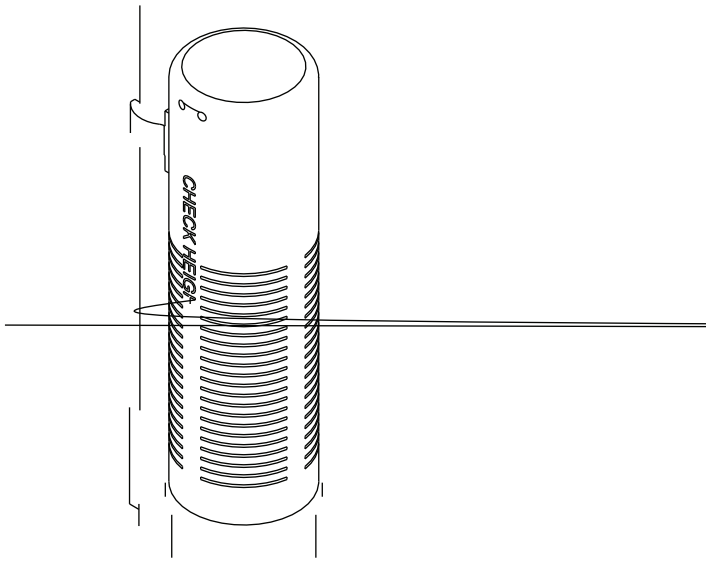
connecting the Drain Line Flow Control ýtting (DLFC).

Teþon tape is the only sealant to be used on the drain ýtting. The drain from twin tank units may be run through a

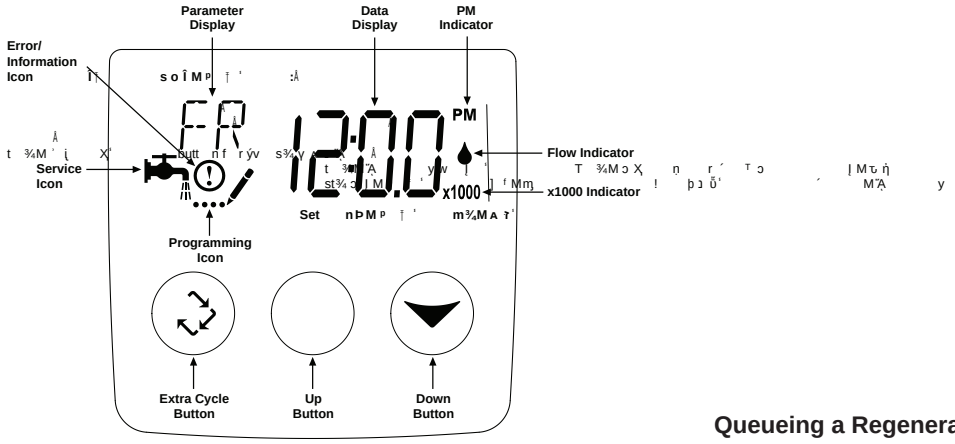
Make sure that the þoor is clean beneath the salt storage

plate. If a grid is not utilized, ýll to the top of the air check

þow into the mineral tank. When water þow stops, slowly



TIMER FEATURES



Queueing a Regeneration

Press the Extra Cycle button. The service icon will þash to

Regenerating Immediately

Press and hold the Extra Cycle button for ýve seconds.

TIMER OPERATION

Meter Immediate Control

Manually Initiating a Regeneration

Regeneration Cycle Step #4 (brine reýll).

Meter Delayed Control

NOTE: If the unit is a ſlter or upſow, the cycle step order may change.

NOTE: A queued regeneration can be initiated by pressing the Extra Cycle button. To clear a queued regeneration, press the Extra Cycle button again to cancel. If regeneration occurs for any reason prior to the delayed regeneration time, the manual regeneration request shall be cleared.

Control Operation During A Power Failure

The SXT includes integral power backup. In the event of power

Time Clock Delayed Control

The system conýguration settings are stored in a non-volatile memory and are stored indeýnitely with or without line power. The Time of Day þashes when there has been a power failure. Press any button to stop the Time of Day from þashing.

Day of the Week Control

The schedule is deýned in Master Programming by setting

speciýed regeneration time.
